San Francisco Bay Area

## SUMMARY

I have 9+ years' experience in both front-end and back-end development, troubleshoot and technical support of .NET apps. With a solid knowledge of Microsoft Azure cloud computing platform & services (IaaS and PaaS), including development, deployment, maintenance, troubleshoot and automation.

I'm skilled and experienced engineer with great analytical, development, time management and communication skills.

## EXPERIENCE

### Senior Software Engineer

#### Sitecore

02/2009 - Ongoing San Francisco, CA, US  
https://sitecore.com

Sitecore is the global leader in experience management software that combines content management, commerce, and customer insights. More than 5,200 brands, including Microsoft, Honeywell, Comcast, Canon, P&G, American Express, Alaska Airlines, SeaWorld use Sitecore.

My current duties include, but not limited to:

- Assist Sitecore's implementation partners from companies as Accenture, Avanade, Perficient, EPAM, Sapient Razorfish etc.
- Consult .NET developers how to design, build, and deploy high performance, scalable, robust, reliable and resilient front-end and back-end web applications on top of Sitecore platform.
- Work with the product team to implement hot-fixes, bug-fixes and architecture gaps for Sitecore Core product and its modules.
- Develop diagnostics & support tools to install multi-nodes cluster, collect and ship diagnostics information from remote servers, process and aggregate thousands of log files.
- Develop an extension for log4net to output millions of log statements directly to Azure Blob Storage in the cloud.
- Write PowerShell scripts to pack and deploy Sitecore web application and its SQL databases to Microsoft Azure.
- Design and develop status page for Sitecore Cloud to monitor core services and hundreds of customers deployments in the cloud.
- Improve the department procedures for developing and delivering thousands of patches for Sitecore implementation partners.
- Contribute to Sitecore's documentation to make developers life easy.
- Investigate performance issues using WinDbg, Process Monitor, Debug Diag, Wireshark, .NET Reflector, dotTrace, SQL Profile and other tools.
- Solve problems of any complexity level that developers cannot solve.
